- Meeting summaries

- Ask your CRM
- Semantic search
- Duplicate detection
- Risk flagging

CONTACTS

- Contacts

RUNNING THE SYSTEM

- Roles and access
- AI usage and cost
- Background jobs
- Configuration
- When AI is off
- On a phone
- Troubleshooting

Running the app

Nothing needs installing beyond Node. The API starts its own database, its own job queue, and seeds a demo team, so the first run works with no configuration.

```
npm install
npm run dev    # app on :3000, API on :4000
```

The first start downloads a database binary and a small embedding model, then caches both. Later starts take a few seconds.

Demo data is not persistent by default

Without a database URL the app runs an in-memory database, so restarting clears everything and reseeds. That is deliberate for a trial. See [Configuration](#) to point it at a real database.

ADMIN

Team

Everyone with an account, and the invitations still outstanding. There is no public sign-up: people join by invitation only.

Invite someone

They receive a one-time link to choose their own password. It expires in seven days, and issuing a new one for the same address cancels the old link.

Email

person@company.com

Name (optional)

So the invitation is personal

Role

member

Send invite

No email server configured, so send this link to newcolleague@company.com yourself

http://localhost:3000/invite/L4rbt2Pqy_S7ThD2FmW9C3bcWgZrn8Ly5B1NZ2_3nK4

Copy link

This link is shown once. If you lose it, use Resend on the invitation below to issue a fresh one.

Pending invitations (1)

Nobody in this list has an account yet.

Email	Role	Invited by	Expires	Actions
newcolleague@company.com Nadia Colleague	Member	Alice Admin	9 Sep 2026	Resend

People (3)

Administrators see every record and can manage the team. Members only ever see what they own.

Invitation created. Send them the link.

Scores, risk flags and summaries in the background as the data changes.

An invitation just issued. The link is shown once, and can be copied straight to the clipboard.

It works without an email server

With `SMTP_URL` configured the link is emailed. Without it the app says so plainly and shows you the link to pass on yourself, so invitations are never blocked on mail setup.

Outstanding invitations. Resend issues a fresh link and cancels the old one; the bin revokes it entirely.

Joining

The invitee opens the link, which works while signed out, and chooses their own password. Nobody else ever knows it.

 PIPELINE AI

Join the team

Alice Admin invited you to join as **Member**. Choose a password to finish.

Email

The invitation is tied to this address.

Your name

Password

- ✗ At least 10 characters
- ✗ A letter
- ✗ A number

Create my account

The invitation as the recipient sees it: who invited them, and as what.

 PIPELINE AI

Join the team

Alice Admin invited you to join as **Member**. Choose a password to finish.

Email

The invitation is tied to this address.

Your name

Password

- ✗ At least 10 characters
- ✓ A letter
- ✓ A number

Create my account

The password rules are checked as you type, and match what the server enforces.

Straight into the app after joining, scoped to their own pipeline with no admin navigation.

The link then stops working. It is single-use, expires after seven days, and is cancelled if a newer invitation is issued for the same address.

The same link opened a second time.

Roles and removal

Administrators can change anyone's role and remove accounts from the Team screen. Three rails stop an instance being broken by accident: the last administrator cannot be demoted or removed, you cannot demote or remove yourself, and nobody who still owns records can be removed until their work is reassigned.

CONTROL	WHERE	WHAT IT DOES
Email	Invite form	Who to invite. Refused if they already have an account.
Name	Invite form	Optional. Pre-fills their name so the invitation reads personally.
Role	Invite form	Member or administrator.
Send invite	Invite form	Issues the invitation, emails it when possible, and shows the link once.
Copy link	After inviting	Copies the invitation link to the clipboard.
Resend	Pending invitations	Issues a fresh link and cancels the previous one.
Bin icon	Pending invitations	Revokes the invitation. Their link stops working immediately.
Role dropdown	People	Promotes or demotes. Refused for the last administrator.
Bin icon	People	Removes the account. Refused while they still own records.

Signing in

Open `localhost:3000` . The form is pre-filled with the admin demo account so you can get straight in.

The sign-in screen, pre-filled with the admin demo account.

ACCOUNT	ROLE	SEES
admin@crm.dev	Admin	Every record, plus the duplicate queue and AI cost pages
ben@crm.dev	Member	Only the contacts and deals they own
cara@crm.dev	Member	Only the contacts and deals they own

All three use the password `password123` . A wrong password is refused in place, with the reason under the fields.

A rejected sign-in. The message states what went wrong and the form keeps your input.

CONTROL	WHERE	WHAT IT DOES
Email	Sign-in form	The account to sign in as. Must be a valid address.
Password	Sign-in form	At least 6 characters. Rate limited to 20 attempts per 15 minutes per address.
Sign in	Sign-in form	Signs in and returns you to the page you were heading for. Disabled while the request is in flight.

Sessions

The session is a signed token in a cookie JavaScript cannot read, valid for seven days. Visiting any page while signed out sends you here and returns you afterwards.

The interface

Three fixed areas, so nothing moves under you as you scroll.

The dashboard. Fixed rail on the left, status header across the top, content in the middle.

The left rail

Always visible and never scrolls away. A sparkle marks the screens where the AI does the work. The **Admin** group only appears for administrators.

The status pill

The single source of truth for whether AI is live. Amber with **AI offline** means the app is running on its built-in fallbacks; green with a model name means Claude is answering. Hover it for the embedding model, vector store and queue in use.

Your account

The button at the top right shows your initials, name and role. It opens a menu with your email address and **Sign out**.

Scrolled down the dashboard. The rail and header hold position while the content moves.

Light and dark

The app follows your system setting. There is no theme switch to find.

The same dashboard in dark mode.

CONTROL	WHERE	WHAT IT DOES
Rail links	Left rail	Navigate. The active page is marked with a rule and tinted background.
Sparkle icon	Left rail	Marks a screen whose main job is done by the AI.
Status pill	Header	Reports AI, embedding, vector store and queue health. Hover for detail.
Account button	Header	Opens the account menu.
Sign out	Account menu	Ends the session and returns to the sign-in screen.

Scores, risk flags and summaries

N

in the background as the

re changes.

Sorted by value. The header arrow shows which column and direction is active.

CONTROL	WHERE	WHAT IT DOES
Search box	Toolbar	Filters by deal title, contact name or company as you type.
Stage dropdown	Toolbar	Shows one stage only, or all.
At risk only	Toolbar	Toggles to just the flagged deals.
New deal	Toolbar	Opens the deal dialog.
Column headers	Table	Sort by title, stage, value, score, close date or last activity.
Previous / Next	Below the table	Pages through results, 25 at a time. Only shown when there is more than one page.
Deal title	Table row	Opens the deal.

Inside a deal

A deal. Score ring beside the title, facts across the middle, tabs below, score breakdown on the right.

The header

Title, score ring and risk badge, then the contact, company and time since last activity. Four actions sit on the right: **Draft follow-up**, **Summarize meeting**, **Edit**, and the delete icon.

The facts panel

Stage is a dropdown, so you can advance a deal without opening the edit dialog. Changing it logs a line to the timeline, resets the stall clock and re-scores. Below it: value, expected close date, owner, and how long the deal has sat in its stage.

The score panel

Six components with the input that produced each one, and the total. **Recompute** forces an immediate recalculation rather than waiting for the background job.

AI summary

Positive +0.85

Meeting summary: Umbrella Health - proposal review call

Thanks both for making time. The goal today is to walk through the proposal we sent last week, answer questions on the security add-on, and agree what happens next. We have read the proposal. Overall the platform does what we need.

Next steps:

I will send both over today along with our standard questionnaire answers so your team can pre-fill most of it.

I will send a revised pricing sheet with both options by Friday.

I will confirm the exact number with the clinical ops leads this week.

Note

Cara Sales

Thanks both for making time. The goal today is to walk through the proposal we sent last week, answer questions on the security add-on, and agree what happens next. We have read the proposal. Overall the platform does what we need.

Next steps:

I will send both over today along with our standard questionnaire answers so your team can pre-fill most of it.

I will send a revised pricing sheet with both options by Friday.

I will confirm the exact number with the clinical ops leads this week.

Scores, risk flags and summaries in the background as the changes.

The Tasks screen, with open and completed separated and a link back to the deal or contact.

CONTROL	WHERE	WHAT IT DOES
Title field	Task composer	The task text. Enter saves.
Date field	Task composer	Optional due date.
+ button	Task composer	Creates the task. Disabled until there is a title.
Checkbox	Each task	Marks done or not done.
Completed group	Below open tasks	Expands to show finished tasks.
open deal / open contact	Tasks screen	Jumps to the record the task belongs to.

Lead scoring

Every deal carries a score from 0 to 100 estimating how likely it is to close, drawn as a ring so you can read the pipeline without reading numbers.

BAND	RING COLOUR	MEANS
70 to 100	Green	Strong. Push to close.
40 to 69	Amber	Live, needs work.
Below 40	Grey	Cold or stalling.

Hover any ring for the breakdown. Six components add up, each shown with the input that produced it.

COMPONENT	RANGE	WHAT MOVES IT
Stage prior	0 to 60	How far along the pipeline the deal is
Recency	0 to 12	Days since anyone touched it
Deal value	0 to 6	Size, on a log scale, so big deals do not dominate
Stage velocity	-15 to 6	Time in the current stage against that stage's threshold
Note sentiment	-12 to 12	Recent note sentiment, weighted toward the newest, plus a trend adjustment
Engagement	0 to 5	Human touches in the last 30 days

Won is always 100 and Lost always 0. The score recalculates whenever the deal or its notes change, and a nightly pass refreshes recency so untouched deals cool off on their own.

Why the model is arithmetic, not a prediction

The formula is deterministic so it can be tested, costs nothing to re-run, and can always be explained to whoever disagrees with it. The AI's contribution is the sentiment of each note, which feeds one component.

Draft follow-up

On any deal or contact, **Draft follow-up** writes the next email for you.

The drafting dialog before generating.

- 1 Optionally say what the email should do, for example "nudge on the revised pricing".
- 2 Pick a tone: professional, friendly or concise.
- 3 **Generate.** The model reads the contact, the deal and its stage, the last eight timeline entries, open tasks and the most recent meeting summary.
- 4 Edit the subject and body freely. They are ordinary text boxes.
- 5 **Send & log to timeline**, or copy it, or open it in your mail client.

A generated draft. The badge says whether Claude wrote it or the template did.

Nothing is ever sent automatically

The AI only ever fills the box. Sending is always a click you make, and the sent email is written to the timeline so the history stays complete.

CONTROL	WHERE	WHAT IT DOES
Purpose field	Top of the dialog	Optional steer for what the email should achieve.
Tone dropdown	Top of the dialog	Professional, friendly or concise.
Generate / Regenerate	Top of the dialog	Writes a draft. Becomes Regenerate once one exists.
Source badge	Above the draft	Generated by Claude, or Template when AI is offline.
To / Subject / Body	The draft	All editable before sending.
Copy	Footer	Copies subject and body to the clipboard.
Open in mail client	Footer	Hands the draft to your email program.
Send & log to timeline	Footer	Sends if SMTP is configured, and always writes the email to the timeline.

Meeting summaries

Summarize meeting on a deal turns a call transcript into a summary, tasks and a sentiment reading.

The transcript dialog. Paste text or upload a file.

OUTPUT	WHAT HAPPENS TO IT
Summary	Written to the deal timeline as a meeting entry
Action items	Created as tasks on the deal, with owner and due date where stated
Sentiment	Feeds the note sentiment component of the lead score
Next steps and topics	Shown on the meeting card for context

Scores, risk flags and summaries in the background as the user changes.

A refused request. The reason is stated rather than a guess being attempted.

The model never touches the database

It proposes a small typed filter. The server checks every field and operator against a fixed allowlist, resolves the dates, rejects anything shaped like an injection, then runs a read-only query with your own access scope applied. A member cannot widen their view by asking nicely.

CONTROL	WHERE	WHAT IT DOES
Question box	Top	Your question. Enter or Ask submits.
Ask	Top	Submits. Disabled while empty.
Example chips	Under the box	Fill and run that question immediately.
Filter chips	Each answer	The validated query that actually ran.
Result rows	Each answer	Click through to the deal or contact.

Semantic search

Search notes by meaning rather than keyword. Describe the situation you are trying to find.

The search screen with example phrasings.

Searching **pricing pushback** surfaces "budget has been cut for this quarter" and "the quote is about 30% above their budget line", neither of which contains a word from the query.

Example chips	Under the box	Fill the box with that phrase.
Match percentage	Each result	How close the note is to your query.
Deal / contact link	Each result	Opens the record the note belongs to.

Duplicate detection

ADMIN ONLY.

New and edited contacts are checked automatically, and a full sweep runs nightly. Likely duplicates land in a review queue rather than being merged.

The screenshot shows the Pipeline AI CRM interface. On the left is a sidebar with navigation links: Dashboard, Deals, Contacts, Tasks, Ask your CRM, Semantic search, and an ADMIN section containing Duplicates (highlighted) and AI usage. The main area is titled 'Possible duplicates' and includes a 'Scan all contacts' button. Below the title is a descriptive paragraph: 'Fuzzy matching on emails, names (nicknames, order, typos), phones and companies, with an optional verdict from Claude. Nothing is merged without your approval.' The interface displays two pairs of potential duplicates, each with a '100% match' status and reasons for the match.

Possible duplicates
Fuzzy matching on emails, names (nicknames, order, typos), phones and companies, with an optional verdict from Claude. Nothing is merged without your approval.

Pair 1: 100% match · Same phone number · Same or equivalent name · Same company

RECORD A	RECORD B
Priya Natarajan Email: priya@initech.com Phone: +1 512 555 0199 Company: Initech Inc Owner: Cara Sales Created: 1 Aug 2026 · touched 2 days ago renewal	Priya Natarajan Email: - Phone: 512-555-0199 Company: Initech Owner: Alice Admin Created: 5 May 2026 · touched 3 months ago

Buttons: Keep this one (for both records), Not a duplicate

Pair 2: 100% match · Email differs by 1 character(s) (liz.turnr@globex.io vs liz.turner@globex.io) · Same or equivalent name · Same company

RECORD A	RECORD B
Elizabeth Turner Email: liz.turner@globex.io Phone: +44 20 7946 0312 Company: Globex Corporation Owner: Ben Member Created: 12 Jul 2026 · touched 22 days ago mid-market	Liz Turner Email: liz.turnr@globex.io Phone: - Company: Globex Owner: Cara Sales Created: 4 Jun 2026 · touched 2 months ago mid-market

Buttons: Keep this one (for both records)

Bottom left: Scores, risk flags and summaries in the background as the user changes.

The review queue. Each pair is shown side by side with the reasons it matched.

The matcher is built for the ways duplicates actually happen: a typo in an email, a mistyped domain, a nickname, a swapped name order, a reformatted phone, a company written two ways. Two different people at the same company are not duplicates and are not flagged.

Reviewing a pair

- **Keep this one** on the record you want to survive. Deals, notes, tasks and meetings move across, empty fields are filled from the other record, tags are combined, and the merge is logged on the timeline.
- **Not a duplicate** dismisses the pair so it stops coming back.

Merging never happens on its own

The queue is a suggestion. A person always picks the survivor, and the app asks for confirmation first. The retired record is hidden rather than deleted, so older links still resolve.

CONTROL	WHERE	WHAT IT DOES
Scan all contacts	Top right	Queues a full sweep instead of waiting for the nightly one.
Match percentage	Each pair	How confident the matcher is.
Reasons	Each pair	The specific signals that matched, such as a mistyped domain.
Keep this one	Each record	Merges the other record into this one, after confirming.
Not a duplicate	Each pair	Dismisses the pair permanently.
Contact name	Each record	Opens that contact in full.

Risk flagging

Open deals are checked on every change and again by a daily scan. Four signals can fire.

SIGNAL	FIRES WHEN
Stalled	The deal has sat in its stage past that stage's threshold, 14 days early on and 21 later
Inactive	Nobody has touched it for longer than the inactivity window, 14 days by default
Sentiment negative	Recent notes are negative, or sentiment has dropped sharply against older notes
Closing soon, unready	The close date is within a week but the deal is still early stage

Flagged deals collect at the top of the dashboard, each with a plain-English reason and a suggested next step. When AI is on, Claude writes that explanation from the actual notes. When it is off, you get the rule-based version, which is shorter but just as specific.

A deal drops off the list as soon as the underlying signals clear. Won and Lost deals are never flagged.

The contacts list. The score column is the contact's strongest open deal.

Search matches name, email, company and tags at once. Every column header with an arrow sorts.

Creating one

The contact dialog. Only the name is required.

Saving triggers a background duplicate check against everyone already in the system.

AI summary

Positive +0.85

Meeting summary: Umbrella Health - proposal review call

Thanks both for making time. The goal today is to walk through the proposal we sent last week, answer questions on the security add-on, and agree what happens next. We have read the proposal. Overall the platform does what we need.

Last touch 37 seconds ago

Created 31 Jul 2026

A contact: their deals, timeline, tasks and profile.

Deleting is a cascade

Deleting a contact removes their deals, notes, tasks and meetings too. To collapse two records into one without losing anything, use the duplicate queue instead.

CONTROL	WHERE	WHAT IT DOES
Search box	Toolbar	Matches name, email, company and tags.
New contact	Toolbar	Opens the contact dialog.
Name / Email / Phone / Company	Dialog	Only the name is required.
Tags	Dialog	Comma separated.
Profile notes	Dialog	Free text about the person.
Owner	Dialog	Admins only. Members always own what they create.
Draft follow-up	Detail header	Writes an email to this person.
New deal	Detail header	Creates a deal with this contact pre-selected.
Edit	Detail header	Reopens the dialog.
Delete icon	Detail header	Removes the contact and everything attached, after confirming.

Roles and access

Two roles. Scoping is applied in the database query, not in the interface, so it holds on every route including the AI ones.

	MEMBER	ADMIN
Contacts, deals, notes, tasks	Own records only	Everything
Ask your CRM, semantic search	Scoped to own records	Everything
Assign an owner	No	Yes
See the team roster	No	Yes
Invite people, change roles	No	Yes
Duplicate review and merge	No	Yes
AI usage and cost	No	Yes
Create users, run jobs	No	Yes

Recent activity

Every note is scored for sentiment and embedded for

Scores, risk flags and summaries in the background as the core changes.

The same dashboard as a member. Smaller pipeline, and the Admin group is gone from the rail.

AI usage and cost

ADMIN ONLY. Every AI call is logged: tokens in and out, cache reads, latency, status and an estimated cost.

The usage page. Provider health, spend, and a per-feature breakdown.

Statuses

STATUS	MEANS
ok	A real model call, billed
cached	Served from the response cache. No tokens, no cost
fallback	No provider configured, so the built-in path ran
error / timeout	The call failed and the feature degraded

[illegible]

CONTROL	WHERE	WHAT IT DOES
Window dropdown	Top right	1, 7, 30 or 90 days.
Reset	Provider card	Closes an open circuit breaker immediately. Only shown when it is not closed.
risk-scan	Background jobs	Re-checks every open deal for risk.
rescore	Background jobs	Refreshes every score.
dedupe-scan	Background jobs	Full duplicate sweep.

rescore

dedupe-scan

By feature

Cached = served from the response cache (no tokens billed). Fallback calls are logged when no provider is configured.

Feature	Calls	Cached	Errors	Input tok	Output tok	Cache read	Avg latency	Est. cost
Lead scoring	0	0	0	0	0	0	-	\$0.0000
Note sentiment	30	0	0	0	0	0	-	\$0.0000
Email drafting	1	0	0	0	0	0	-	\$0.0000
Ask your CRM	2	0	0	0	0	0	-	\$0.0000
Meeting summaries	1	0	0	0	0	0	-	\$0.0000
Embeddings / search	0	0	0	0	0	0	-	\$0.0000
Duplicate detection	6	0	0	0	0	0	-	\$0.0000
Risk flagging	6	0	0	0	0	0	-	\$0.0000

Recent calls

Time	Feature	Status	Model	Tokens in/out	Latency	Cost	Error
------	---------	--------	-------	---------------	---------	------	-------

risk-scan queued

Last 30 days

Scores, risk flags and summaries in the background as the data changes.

A background job queued by hand.

Background jobs

Work that would make you wait happens off the request. Scoring, sentiment, embedding, summarizing, duplicate checks and risk assessment all run as jobs, and rapid edits to one record collapse into a single job.

SCHEDULED	JOB	RUNS	DOES
	Risk scan	Daily, 6am	Re-checks every open deal for risk signals
	Rescore	Daily, 5am	Refreshes scores so untouched deals cool off
	Duplicate sweep	Daily, 5.30am	Full pass over contacts

Configuration

Copy `.env.example` to `.env`. Every setting has a working default; the ones below are worth changing.

Turning on Claude

```
ANTHROPIC_API_KEY=sk-ant- ...
ANTHROPIC_MODEL=claude-opus-5
```

Restart, and the header pill turns green.

Persistent data and durable jobs

```
docker compose up -d          # database + redis
MONGODB_URI=mongodb://localhost:27017/crm
REDIS_URL=redis://localhost:6379
npm run seed -w @crm/api      # add --reset to wipe
```

Embeddings and vector search

By default a small model runs inside the app and needs no key. Set `VOYAGE_API_KEY` or `OPENAI_API_KEY` to use a hosted one. For large note volumes, set `PINECONE_API_KEY` and `PINECONE_INDEX`.

Tuning

SETTING	DEFAULT	EFFECT
RISK_INACTIVITY_DAYS	14	Silence before a deal counts as inactive
AI_TIMEOUT_MS	45000	How long an AI call may take before falling back
AI_RATE_LIMIT_PER_MINUTE	30	AI requests per user per minute
AI_CIRCUIT_FAILURES	4	Consecutive failures before the circuit opens
SMTP_URL	unset	Set to actually deliver email; otherwise drafts are logged only

When AI is off

No feature disappears without a provider, and none of them break a screen. Each degrades to something honest and says so in the interface.

FEATURE	WITHOUT A PROVIDER
Lead scoring	Sentiment comes from a keyword model. The score formula is unchanged.
Draft follow-up	A stage-appropriate template, labelled as one.
Ask your CRM	Built-in rules handle the common questions. Anything else says so.
Meeting summaries	Extracted summary and commitment-style action items.
Semantic search	Keyword search, with the reason shown.
Duplicates	Full matching, minus the written verdict.
Risk flagging	The same signals with a rule-based explanation.

The same applies when the provider is merely slow or erroring. A timeout falls back rather than hanging the page.

On a phone

The rail collapses into a scrolling row of links across the top, and the dashboard becomes a single column. Tables scroll sideways inside their own container, so the page itself never does.

The dashboard on a phone.

Troubleshooting

Everything logged me out

The API restarted while running the in-memory database, so it reseeded with new accounts. Sign back in. Set a database URL to stop this.

A score or risk flag looks stale

Both update on a background job a moment after the change. **Recompute** on the deal page forces it. If nothing moves, check the circuit breaker on the AI usage page.

Semantic search says keyword fallback

Either nothing has been embedded yet, or the embedding model is still loading on first run, or the vector store is unreachable. Hover the status pill to see which.

A meeting stayed queued

Open it and use **Retry**. If the provider was down, the retry will pick it up once it recovers.

My question was rejected

The rejection text says why. Usually the question asked for a write, or for an aggregate the filter language cannot express. Rephrase it as a filter over deals or contacts.
